

1. Target Keyword: Why should you protect your new car with a clear bra before driving it?

Page Title: Why should you protect your new car with a clear bra before driving it?

Why should you protect your new car with a clear bra before driving it? According to The Federal Highway Administration, in the United States there are as many as two hundred million licensed drivers traveling around. That makes for a lot of vehicles on the roads at any given moment, kicking up a lot of road debris and such. This can be damaging to a vehicle and many people look for ways to protect the front end of their car. The overall concept of a clear bra is great. You can protect the paint on your car for the long term.

A clear bra is almost entirely invisible and it basically is a professionally applied film that protects the paint of your car. It's made from urethane and it's durable enough to protect the front end of your vehicle from harmful debris such as stones, sand, etc. You also won't have to scrape bugs off the front of your car, hoping you don't damage the finish.

Vehicles are a big investment and a clear bra will allow you to protect that investment. When it comes time to trade your vehicle in you will find you are offered more from a simple investment that takes only about one to four hours to apply. Application time all depends on how much of your vehicle you choose to have a clear bra applied to, but you will see a difference in the amount of weathering, fading and damage your vehicle encounters.

The average, high quality clear bra will last as many as ten years. It is considered semi-permanent so you can remove it and replace it whenever you want if it starts to show signs of wear. Low quality products may yellow or look worn over time so it's always best to find a reputable shop to do the work for you.

Why should you protect your new car with a clear bra before driving it? The overall concept is great. Allowing for just a few extra hours before you can pick up your vehicle will protect your investment in the long run. You can drive your vehicle with more peace of mind knowing that any small debris that comes your way won't wreak havoc on the front end of your vehicle. Whether you do a lot of city driving or you like to sit back and relax for a long country drive, your vehicle is always at risk for damage from the road. A clear bra prevents this from occurring.

2. Target Keyword: Upcoming car races to check out
Page Title: Upcoming car races to check out

Do you have a hobby that involves sports cars or race cars? The race car season is almost over, but you may be able to catch a few more races before the end of November! If you don't go right away, you might have race withdrawal until next year around the end of February when it begins again.

Let's talk about sprint dirt racing which is separate from NASCAR. The sprint dirt series of racing is much different than the 'Sprint Cup' races at the NASCAR tracks. They are more exciting, and hence, more dangerous as well. Many racers have lost their lives or have gotten seriously hurt from sprint dirt racing. NASCAR's driver Tony Stewart a.k.a. "Smoke," just broke his leg in the sprint series and will have different drivers replacing him in his #14 car!

Upcoming Car Races to Check Out

But if you like to watch this kind of dangerous action, just as most car racers do, then let's review the dates and locations of the upcoming car races for the American Sprint Car Series (A.S.C.S.):

1. August 17th
 - o Salina Highbanks Speedway - Salina, OK
 - o Canyon Speedway Park - Peoria, AZ
 - o Willamette Speedway - Lebanon, OR
2. August 22nd
 - o I-30 Speedway - Hammer Hill Showdown, Little Rock, AR
3. August 23rd
 - o Gallatin Speedway - Belgrade, MT
 - o College Grove Speedway - Cottage Grove, OR
4. August 30th and 31st
 - o Jackson Speedway - Jackson, MN

NASCAR

If you want something closer to home with more racing options, upcoming car races to check out by NASCAR may be your best bet. Have you been to a NASCAR race yet? Have you experienced the thrill of the engines roaring when they rev up at the start line? What an adrenaline rush!

There are a lot of people and it tends to get crowded fast, so you may want to try an ARCA, Nationwide, or even a truck series race before deciding to attend a Sprint Cup Race. Some upcoming car races to check out are as follows:

1. August 21st, 23rd, and 24th - Camping World Truck Series, Nationwide, and Sprint Cup Series @ Bristol Motor Speedway
2. August 31st-Sept. 1 - Nationwide and Sprint Cup Series: Atlanta Motor Speedway
3. Sept 6 and 7th - Nationwide and Sprint Cup Series: Richmond Int'l Speedway
4. Sept. 8th - Camping World Truck Series @ Iowa Speedway

There are plenty more upcoming car races to check out up until November for the NASCAR series and Camping World Truck Series. You've never really lived until you've been to a car race. It's great for your entire family, and the experience is exciting, fun, and will give you a surge of adrenaline.

3. Target Keyword: How to clean bugs and road debris off of your clear bra
Page Title: How to clean bugs and road debris off of your clear bra.

Clear bras work wonderfully for adding a protective shield to your vehicle to keep it safe from road debris such as sand, stones, asphalt and more. Because of this, the bra itself can become dirty over time. When it comes time to give your car a washing you should pay extra attention to how to clean bugs and road debris off of your clear bra in order to preserve its life and appearance. Unfortunately, while the clear bras are definitely more attractive than the old school black vinyl versions, they require a little more work when cleaning them and making them last so imperfections don't show up on the clear film.

Something that you should keep on hand when you have a clear bra on your vehicle is a good quality car wash liquid. If you mix equal parts water and cleaner and use a good car sponge you should be able to get the majority of the bugs and debris off. Keep up on the cleaning of the bugs and debris so they don't get really stuck and become impossible to remove. This is especially true in the summer months when bugs and roadwork are in full swing. Bugs are very acidic and if you leave them on the clear bra for too long you may find they have permanently damaged the bra. There are even soaps you can purchase for your car designed to easily remove stuck on bugs.

A clay bar is a safe tool to use to clean bugs and road debris off your clear bra. Once used only in car detailing shops, this product works better than a sponge, but it's not hard enough to damage the bra or the vehicle's surface underneath. With a little patience and a gentle hand a clay bar can keep your clear bra looking like the day you had it applied. You simply flatten a piece of clay bar to fit

into the palm of your hand, apply a clay bar lubricant to the spot you want to clean and then slide the clay bar back and forth as gently as possible. After you are done simply wipe off the excess lubricant and your clear bra should look brand new.

It's important to focus on properly cleaning bugs and other road debris off your clear bra periodically to keep your vehicle looking nice and to prevent any permanent damage to the bra. Some other things to keep an eye out for are residue buildup along the edges of the bra film and the edge lifting up. With proper maintenance your bra can last you up to ten years before needing reapplication.

4. Target Keyword: Self-healing paint protection film

Page Title: Self-healing paint protection film. Don't worry about the scratches anymore!

If you've ever gotten a scratch on your car, you understand how expensive it can be to be repaired - not only to your wallet, but your pride. To most, a car is more than just a piece of metal to get from place A to B, and it being scratched is something that must be dealt with properly. Scratches are something professional auto body technicians can fix well and have your car back to normal, but what if you never had to worry about a scratch again? Not only this, but what if you could have the paint look as good as the day you bought it, years down the road?

Self-healing paint protection film is now available to protect your car's painted surfaces from scratches and keep the paint on your car as beautiful as the day you bought it. These films use the same idea as putting a screen protector on your phone. This is better than the black leather auto bras because these films can be used almost anywhere on your vehicle: mirrors, door edges, rear bumper, rocker panels, and more. Yet another benefit to using this protection film is that it doesn't alter the look of your car, a feature auto bras definitely lack, along with its other downfalls in comparison to paint protection film.

Your car can be protected from environmental elements, stone chips, bugs, and abrasions by self-healing paint protection film. Self-healing paint protection film also has ultra-violet inhibitors to prevent it from yellowing on your car's paint. It is a tough thermo-plastic urethane that conforms to your car. To further help the film fit your car perfectly, it is custom cut by a computer.

Along with the possibility of being an eyesore and only covering a small portion of

your vehicle, auto bras can actually damage your car's painted surfaces. Without any kind of protection, it is hard to keep a car looking brand new. As hard as you try, unless you simply don't drive it, you will risk getting your car damaged from the sun, bugs, chips and paint oxidation.

Repairing even a small scratch can be expensive and difficult, and repainting a vehicle to fix sun, bug or other damaging environmental hazards can be even more costly. Consider not only the initial cost, but the possibility of a new paint job being done incorrectly and decreasing the value of your vehicle. Also, if a new paint job is done incorrectly, it can prevent your vehicle from looking its best.

If the question is how to extensively protect your vehicle from damaging environmental circumstances and keep it looking brand new, self-healing paint protection film is the answer.

5. Target Keyword: What areas should you cover with paint protection film?
Page Title: What areas should you cover with paint protection film?

When choosing protection for your vehicle, one of the easiest choices is to have a protective film applied to your car. The question of course becomes: *What areas should you cover with paint protection film?* Choosing the sites for application becomes obvious when you consider the use of the film.

What is protective film?

As the name suggests, protective film is a clear coating designed to protect the paint on your vehicle from damage caused by small scratches, road debris, sand and salt. It is most effective when applied to the areas of your car that face forward, or often suffer damage. The most obvious of these is the bumper, but there are some surprising areas that you may want to consider.

What areas should you cover with paint protection film?

Critical:

- Start with the bumper. This is the area of your vehicle that both faces forward and is exposed to debris from the road. This is one of the most important places to protect.
- Fender edges/lower portion. The wheels kick up debris. You want to protect the fenders as well.

- Side view mirrors. Although higher, these also receive the full force of the air as the vehicle is driven and quickly become nicked.
- Rocker panels. They are next to the debris getting kicked up from the road and will benefit from a layer of protection.
- Door edges and handle insets. These areas often suffer chips due to frequent usage. Door edges are bumped when entering or exiting the vehicle and keys, handbags and other sharp objects can scratch the handle insets. A layer of protective film will keep these areas looking sleek and smooth.

Consider:

- Trunk ledges. Again, the trunk can be damaged from objects being put in or removed. Consider adding protection here if you frequently use your trunk space.
- The hood. The hood is less susceptible to damage from the road, but it is the part of your vehicle that is noticed first. Protective film will keep it looking its best. You may want to protect the front portion only, or the entire piece.
- Full fenders. Continue the film up the side of the vehicle, especially if you frequently use gravel or dirt roads.
- The entire vehicle. This is not common but might be a good idea for someone who often encounters poor road conditions.

Once applied, the protective film is invisible and you care for it just like paint. It should be washed and waxed the same way as the rest of the vehicle. The difference is you won't be trying to wax over that scratch you just found.

If the initial question, *What areas should you cover with paint protection film?* hasn't been answered for you, consult an expert in your area.

6. Target Keyword: Avery Nano Fusion Paint Protection Film
Page Title: Avery Nano Fusion Paint Protection Film

Clear bras and other forms of paint protection film have been on the market for some time, varying widely in price, appearance and effectiveness. Because there are so many substandard forms of paint protection film out there, many drivers are looking for the best option available. Avery Nano Fusion Paint Protection Film has become one of the most popular and reputable products on the market when it comes to paint protection film, and there are several reasons why this is the

case.

Features

Avery Nano Fusion Paint Protection Film is comprised of stiffer material that has been expertly laminated to its urethane counterpart. For virtually the same price as competitors, you can get a lot more versatility and endurance from Avery Nano Fusion Paint Protection Film. This paint protection film, unlike many others, allows your car to keep a brilliant gleam while working to prevent cracking and discoloration all too often seen in other paint protection film products.

Quality Tested

Avery Nano Fusion Paint Protection Film has passed a gauntlet of quality control tests. This protection film has passed everything from Tensile Elongation and Thermal Cycle to Water Immersion tests with flying colors. Issues like weathering and heat damage, too, have been confronted by this new paint protection film and will provide you with years of unrivaled protection for your vehicle, no matter the conditions.

Easy Install

Avery Nano Fusion Paint Protection Film is not only easy to install, it's easy to move or adjust to fit every contour of your vehicle. The installation cost for this paint protection film is not extravagant, and because Avery Nano Fusion Paint Protection Film can withstand virtually anything you throw at it, you won't have to get it replaced any time soon. All too often drivers concede to purchasing paint protection film that simply can't stand the test of time, not knowing that higher quality paint protection is available. Many drivers find themselves replacing their paint protection film several times- and sometimes dozens- before discovering a breakthrough like Avery Nano Fusion Paint Protection.

Don't let unnecessary damage to your automobile decrease the resale value or diminish its aesthetic value. Purchasing the right paint protection film the first time around can prevent headaches later on. If you want to get paint protection for your automobile, don't settle for any cheap imitation alternatives. Avery Nano Fusion Paint Protection has been proven to work and continues to be a favorite among drivers and auto technicians alike. If you're looking for long term protection for your vehicle from the daily rigors of driving, weathering and other detrimental factors that could damage your vehicle, Avery Nano Fusion Paint Protection Film is the best possible solution.
