Balume Simplifies Shipping Liquid Cargo

Liquid Logistics Gets Simpler, Faster and More Reliable

Brazil, August, 2013 – For 20 years, Columbus International Logistics has made it simpler to ship cargo around the world. Now, they are doing the same with liquid cargo. Balume, a subsidiary of Columbus, specializes in providing Flexitank solutions to companies around the world. Balume will support customers through a comprehensive, global network of highly trained personnel and state of the art technology. According to a company spokesperson, “Flexitank Logistics (liquid logistics) is our specialty and we love doing it.”

Balume offers three key benefits:

- Liquid logistics is complicated; liquid cargo requires particular care to avoid extreme temperatures, excessive vibration and contamination. Balume has the people, skills and equipment to handle nearly any situation. No matter where liquid cargo must be delivered, Balume can get it there, allowing customers to focus on their core competencies.
- Liquid logistics is slow. Customs, inspections and cargo transfers take time. Balume streamlines this process by having people on site to guide cargo through the maze of procedures and regulations. Liquid cargo is often time dependent; Balume saves time.
- Liquid logistics is hazardous; mistakes in handling liquid can lead to spills, contamination and loss of product. Balume uses a proprietary flexitank with exclusive valves, designed to keep your cargo safe. If a Balume flexitank ever fails, Balume has a strategically placed inventory of replacement tanks ready, worldwide.

Balume is the solution for liquid logistics problems. No one else can match the combination of experience and resources that Balume has available. For more information, visit www.Balume.com.
